Figure 2

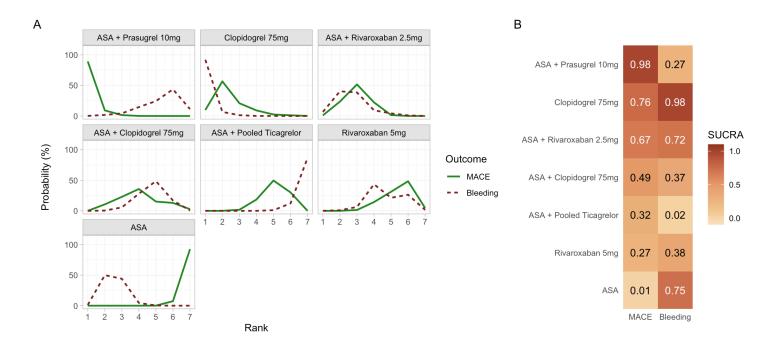

Network Plot; Treatment effects compared to ASA on MACE and Bleeding outcomes, ordered according to underlying SUCRA values. HR below 1.0 favors the experimental treatment. On the left, treatment names are depicted. In the middle, forest plot shows each treatment effect median and 95% credible intervals. Gray area corresponds to the ROPE (from 0.8 to 1.25 HR). On the right, exact effect sizes along with posterior probabilities are shown.

Abbreviations: ROPE, region of practical equivalence; HR, hazard ratio.

Figure 3

Panel A: Ranking probabilities for MACE (solid line) and Bleeding (dotted line) outcomes for each treatment. Panel B: Heatmap with corresponding SUCRA values. While each row corresponds to a treatment, each column depicts one outcome.
